*****Environmental Update for Central Blvd. Elementary School*****

The Bethpage School District received a good report today on air quality at Central Blvd. The district tested for radon following the detection of radium in groundwater 50 feet below the surface. Our independent environmental consultants provided us with a verbal report today indicating that every area tested was well BELOW EPA established guidelines. This is good news and means the air quality at Central Blvd. meets all standards.

The Board of Education will remain vigilant on this issue and testing/monitoring will continue. Once we receive the written report, it will be posted to our website with all the other environmental reports conducted over the past nine years.
